PROFESSIONAL SUMMARY

MERN Stack Web Developer and BCA graduate (2026) with hands-on experience designing, building, and deploying FinLearn, a full-stack gamified personal finance web application. Proficient in HTML, CSS, JavaScript (ES6+), React.js, Node.js, Express.js, MongoDB, and REST API development and testing with Postman. Strong programming foundation in C and C++, with UI/UX design skills in Figma and experience using AI-assisted coding tools to accelerate development. Completed Forage's Skyscanner Front-End Software Engineering Job Simulation. Seeking a MERN Stack / Full-Stack Web Development internship or entry-level role to contribute to real-world projects and grow within a development team.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, Responsive Web Design

Backend & Database: Node.js, Express.js, MongoDB, MERN Stack, REST API Integration, Authentication, CRUD Operations

Tools & Platforms: Postman API, Git, GitHub, VS Code, AI-Assisted Coding Tools

Programming Languages: C, C++

Design: Figma (UI/UX Design)

PROJECTS

FinLearn — Full-Stack Personal Finance Web Application

Dec 2025 – Jun 2026

MERN Stack | Rama Institute of Higher Education, Kiratpur

- Built and deployed a full-stack, gamified personal finance platform using MongoDB, Express.js, React.js, and Node.js, transforming financial literacy into an engaging, interactive learning experience.
- Designed a gamification system with XP tracking, daily streaks, and milestone badges to drive consistent user engagement and improve learning retention.
- Developed structured, certificate-granting financial courses paired with an interactive AI-powered financial chatbot for personalized guidance.
- Built and integrated 7 real-world financial calculators (including EMI, SIP, and budgeting tools) to bridge the gap between theoretical learning and practical application.
- Tested and validated backend API endpoints using Postman to ensure reliable client-server communication.
- Applied AI-assisted development practices to accelerate coding, debugging, and shipping of production-ready features.

VIRTUAL EXPERIENCE

Front-End Software Engineering Job Simulation — Skyscanner (via Forage)

Sep 2025

- Completed a job simulation covering practical front-end engineering tasks used by Skyscanner's development team.
- Built a React-based "Backpack" feature web application, applying component-based architecture and state management principles.
- Practiced real-world front-end workflows, including component design, debugging, and code review standards used in industry settings.

EDUCATION

Bachelor of Computer Applications (BCA)

Aug 2023 – Aug 2026

Rama Institute of Higher Education, Kiratpur — Computer Applications

CERTIFICATIONS

- AI for All | Skyscanner — Front-End Software Engineering Job Simulation (Forage)
- Introduction to C | C++ Course
